BATCH: 5

Mini Project 4: Even or Odd Checker in Python

1. Project Title

Even or Odd Number Checker using Python

2. Aim

To design a Python program that allows the user to input a number and determine whether it is Even or Odd, and display the result clearly.

3. Problem Statement

To create a Python program that checks whether a given number is Even or Odd using conditional statements and functions.

4. Objectives

- To check whether a number is Even or Odd using Python.
- To use functions and conditional statements in a program.
- To improve logical thinking in programming.
- To understand the use of the modulo operator (%).

5. Tools Used

- Python 3
- VS Code / IDLE

6. Description

This project allows the user to enter a number and checks whether it is Even or Odd.

The program uses a function to perform the checking operation.

Using functions helps organize the program and makes the code easy to understand, reusable, and modular.

7. Algorithm

1. Start the program.
2. Read a number from the user.
3. Call the function `check_even_odd(num)`.
4. Inside the function:
 - If `num % 2 == 0`, the number is Even.
 - Otherwise, the number is Odd.
5. Display the result to the user.
6. Stop the program.

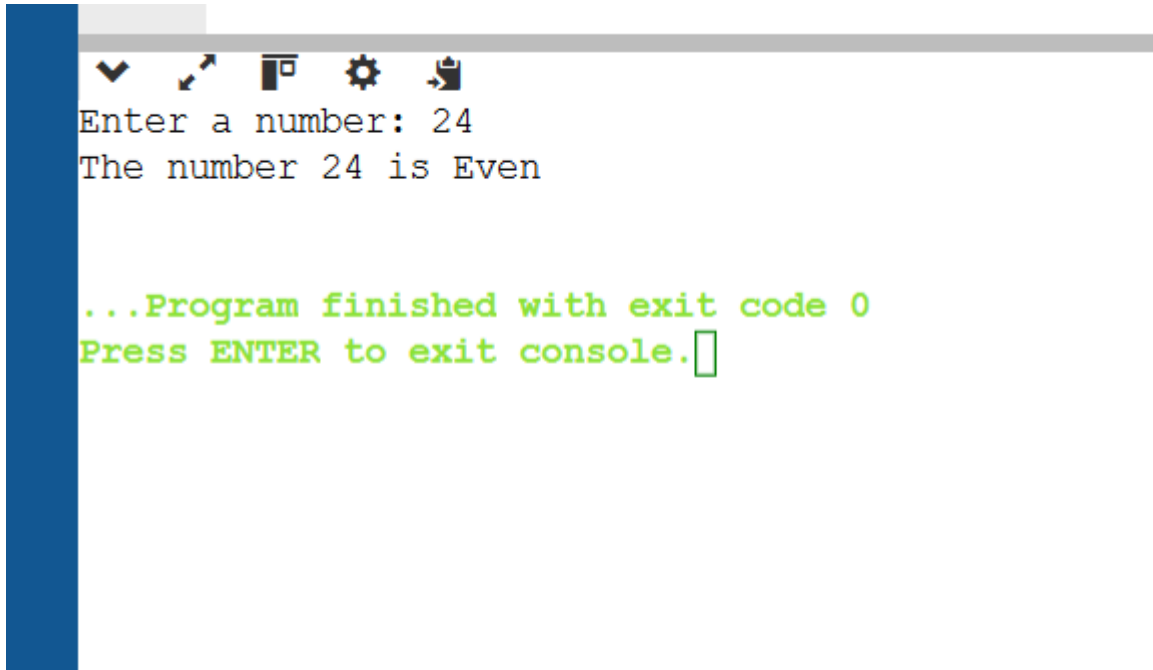

8. Program (Python Code)

```
# Function to check even or odd
def check_even_odd(num):
    if num % 2 == 0:
        return "Even"
    else:
        return "Odd"

# Input from user
number = int(input("Enter a number: "))
```

```
# Call function and display result
result = check_even_odd(number)
print("The number", number, "is", result)
```

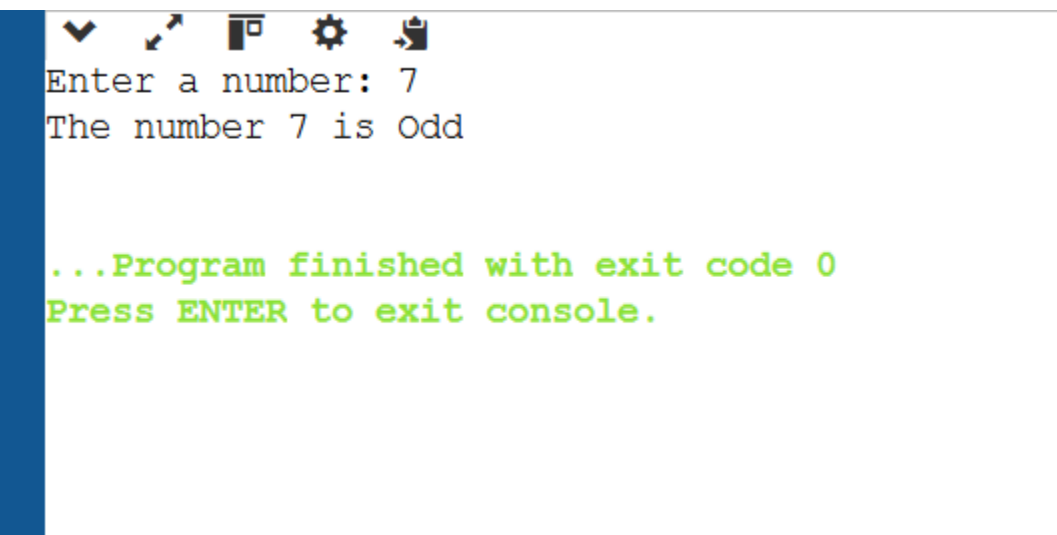

9. Output

A screenshot of a console window with a blue title bar and a grey menu bar. The menu bar contains icons for a dropdown arrow, a zoom in/out icon, a copy icon, a settings gear, and a close icon. The console text shows the program prompting for a number, receiving '24', and outputting 'The number 24 is Even'. It then displays a green message: '...Program finished with exit code 0' and 'Press ENTER to exit console.' with a cursor at the end.

```
Enter a number: 24
The number 24 is Even

...Program finished with exit code 0
Press ENTER to exit console.
```

A screenshot of a console window with a blue title bar and a grey menu bar. The menu bar contains icons for a dropdown arrow, a zoom in/out icon, a copy icon, a settings gear, and a close icon. The console text shows the program prompting for a number, receiving '7', and outputting 'The number 7 is Odd'. It then displays a green message: '...Program finished with exit code 0' and 'Press ENTER to exit console.' with a cursor at the end.

```
Enter a number: 7
The number 7 is Odd

...Program finished with exit code 0
Press ENTER to exit console.
```

10. Result

The Python program successfully checks whether the entered number is Even or Odd and displays the correct result.

11. Conclusion

This project demonstrates how Python can be used to determine whether a number is Even or Odd using functions and conditional statements.

It helps in understanding basic programming concepts such as functions, input/output operations, conditional logic, and the modulo operator (%).
